

Safe, Non Toxic, Natural Geoengineering

Toxic artificial geoengineering needs to be replaced with environmentally sound geoengineering that is safe, non-toxic and all natural and only **one** company offers it, Strategic Visionary Alternatives, Ltd., of Port Moody, British Columbia. We know the public wants their blue skies back, safe food and breathable air. We want clean affordable energy too, not economic shut down because CO₂ gases have not been capped and recycled. The All Natural Strategic Program delivers all of this. We have all seen the imitation's patents, and sky pollution that has lead to droughts and toxic soils, and dying forests. What we use is gentle and natural oxygen ions and we can stimulate rain and remove particulates and stranded ions blocking the release of heat waves at night, these two actions will cool the air shed and cool off higher mountain slopes and peaks where snow accumulates if cooled enough at night. This is achieved with no toxic residues. This stands head and shoulders above synthetic chemistry that blocks precious sunlight instead of venting heat, which is shown in the diagram below to be much faster. Snow pack accumulation relies on cold clearer nights.

RUNAWAY GLOBAL WARMING IN 2016

<http://www.asterism.org/tutorials/tut37%20Radiative%20Cooling.pdf>

Global Temperature Time Series

The recent accelerated warming of grave concern coincides with the current synthetic geoengineering operations. These chemicals are not compliant with ENMOD treaties governing weather and climate modification but the natural safe non toxic geoengineering complies exceedingly. These projects were classified so that they could operate unimpeded for over twenty years in which the data claims are success in dimming life giving sunlight for our plants and forests, as well as contaminating trees, animals, and humans and likely increasing the temperature of the air. Aluminum, Barium and Strontium in our blood streams are a suspected cause of Alzheimer's and cancer. We need to

protect ourselves from this completely unnecessary hazard.

Safe, Non Toxic, Natural Geoengineering

Understanding “snowball earth” events which were found as the cause of different length ice ages and regional glaciations is well understood in our geological records, and holds many lessons that we can draw on as we focus on air shed cool-downs and precipitation seeding. The more air sheds that are remediated, the more net cooling is achieved. UV radiation and protection is done through Art Above Sustainable Systems Inc. Oxygen ions can be permanently bonded with the troublesome Fluorine ion in the Ozone layer, halting the devastating effects. Adding more O₂ and O₃/O₂ supplies to function as our properly restored UV shield once quantities are restored and further protected from CFC's and damaging synthetic geoengineering operations and Ozone depleting substances damage.

What are the costs of not acting?

\$8.1 Billion Skin cancer x 5% of it is Ozone hole caused, or \$403,000,000.00/year, Cataracts from the same cause, \$9Billion/ year. By 2070 and beyond, the personal GDP will be cut by at least 23%, down from \$79 Trillion in 2015 and cost \$50 Trillion. Total: \$130 Trillion by 2080 conservatively. (<https://www.weforum.org/agenda/2015/11/what-are-the-economic-consequences-of-climate-change/>). (<http://time.com/4082328/climate-change-economic-impact/>).

There are Three Companies providing these solutions:

Strategic Visionary Alternatives Ltd.

Cost to Deliver:

The \$5 per Kilogram cost is estimated based upon the point source of oxygen. The Aurora Scientific Inc. referenced airlift cost for synthetic geoengineering has been estimated for these altitudes at \$3US per Kilogram¹⁴, giving a total of \$8US/Kg. The costs will vary with the amount delivered to a region. More information can be found at www.gcgreencarbon.com
